

# -40 Powder

Enviro Friendly All-Natural Corncob Solutions

## Applications

- **Carrier**
  - Animal Feed/Health/Medication
- **Foundry Casting Burnout Material**

## Benefits

All-Natural

Biodegradable

Super Absorbent

- All-Natural
- Biodegradable
- Lightweight
- Absorbent
- Made in the USA

## The Best Cob Difference

Best Cob specializes in creating the **highest quality, enviro-friendly, sustainable,** and **renewable corncob products** that service and support a wide range of industries **since 1966.**

We are a **faith-based** company who focuses on our **communities** and **employees.** We pride ourselves on being a **preferred, reliable supplier** who **stores corncob indoors** to ensure the **cleanest, driest, high quality** product to **consistently meet our customers' expectations.**

**Animal Feed Health / Medication Carrier:** Best Cob -40 is a superior medium for carrying liquids and granules for animal nutrition & medication. It facilitates homogeneous mixing and a uniform distribution of components in compound feed or premixtures that are safe for consumption.

**Foundry Casting Burnout Material:** Best Cob -40 is used as an aggregate in foundry applications due to its low ash (1.6%) and high BTU value (8000). Corncob is beneficial when casting as it balances the high temperature expansion of sand, thus reducing cracking. It also improves the shakeout process by making molds more collapsible and mixes well with other burnout materials to produce the most sophisticated designs.

Corncob is an enviro-friendly, biodegradable, & inert product that has no impact on the integrity of additives.

### Corncob Processing Procedure

Corncobs are processed through a series of milling, grinding, and screening processes. Products are classified by particle distribution size using a US standard mesh. If further information is needed, please request a specification sheet.

\*Product is natural cellulose material and may be discarded into normal waste or incinerated by approved methods. If the material has been used to absorb spills, follow state and local disposal regulations.
